

Essential Offerings From PLC...

Focus Forward

Effective Instructional Technology: Your district needs it. Are you ready?

Move from surviving to thriving. Effective systems for instructional technology have never been more important. This is a new and innovative offering from PLC Associates, Inc.

Interested: Please contact PLC Associates, Inc. Penny Ciaburri pciaburri@plcassociates.com

or contact the PLC Associates you are currently working with!

These are the offerings districts are asking for!

Our School Leaders and Educators:

➤ **First...We will partner together on an instructional technology needs assessment.**

What systems are in already in place to support effective instructional technology? Let's prioritize.

To maximize the use of instructional technology throughout your school district, systems must be established to support all six areas of the effective instructional technology framework. These systems are stronger together and lay the foundation for increased capacity for instructional technology across the organization.

➤ **Then...We will provide wrap around support to strengthen and establish technology systems.**

Flexible and responsive supports:

Our PLC Team understands each school district will have a different entry point to this work. We will personalize solutions to your district's most pressing needs.

Alignment across the six areas of effective instructional technology is essential to remote, hybrid and in-person learning models. We can help with:

- Strategic Planning – Analyze current plans and facilitate the development, implementation and monitoring of new strategic plans per NYSED guidelines.
- Compliance – Support the conversion to updated Ed. Law 2-D guidelines for technology required by NYSED.
- Integration – Establish and execute plans for the implementation of technology hardware and software to maximize usage and align to district goals.
- Communication – Develop and implement a communication plan to support instructional technology initiatives utilizing existing district software.
- Technology Management – Streamline existing hardware and software through evaluating current inventory and aligning future purchases to maximize resources and align to state contracts.
- Instructional Design – Align technology standards to district curriculums to embed additional opportunities for districts to personalize instruction and empower students.
